

Video Notes: Review Simplifying and Rationalizing Radicals

Aim#09: How can we use our knowledge of perfect squares to simplify and rationalize radical expressions?

Learning Target(s): I am able to simplify and rationalize radicals.

As you are watching the video and taking notes, please make sure to write down any questions you have

Guiding Questions	Notes/Diagrams/Illustrations																
<p>What is a perfect square?</p> <p><i>* use GC if you forget</i></p>	<p>A number whose positive <u>square</u> <u>root</u> is a whole number.</p> <table style="margin-left: 40px;"> <tr> <td>1</td> <td>25</td> <td>81</td> <td>169</td> </tr> <tr> <td>4</td> <td>36</td> <td>100</td> <td>225</td> </tr> <tr> <td>9</td> <td>49</td> <td>121</td> <td></td> </tr> <tr> <td>16</td> <td>64</td> <td>144</td> <td></td> </tr> </table>	1	25	81	169	4	36	100	225	9	49	121		16	64	144	
1	25	81	169														
4	36	100	225														
9	49	121															
16	64	144															
<p>What will help me simplify a radical?</p> <p>Step 1: <i>list PS that divide in</i></p> <p>Step 2: <i>choose largest reduce</i></p>	<p>1. $\sqrt{48} \rightarrow \sqrt{16} \sqrt{3}$</p> <table style="margin-left: 40px;"> <tr> <td>4</td> <td>12</td> <td rowspan="2" style="border: 1px solid black; padding: 5px;">$4\sqrt{3}$</td> </tr> <tr> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">16</td> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">3</td> </tr> </table> <p>2. $\sqrt{72} \rightarrow \sqrt{36} \sqrt{2}$</p> <table style="margin-left: 40px;"> <tr> <td>4</td> <td>18</td> <td rowspan="2" style="border: 1px solid black; padding: 5px;">$6\sqrt{2}$</td> </tr> <tr> <td>9</td> <td>8</td> </tr> <tr> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">36</td> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">2</td> <td></td> </tr> </table>	4	12	$4\sqrt{3}$	16	3	4	18	$6\sqrt{2}$	9	8	36	2				
4	12	$4\sqrt{3}$															
16	3																
4	18	$6\sqrt{2}$															
9	8																
36	2																
<p>How does a coefficient effect the process?</p> <p>Step 1: <i>list PS that divide</i></p> <p>Step 2: <i>choose largest reduce</i></p> <p>Step 3: <i>mult. # out front</i></p>	<p>3. $3\sqrt{20} \rightarrow 3\sqrt{4} \sqrt{5}$</p> <table style="margin-left: 40px;"> <tr> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">4</td> <td style="border: 1px solid black; border-radius: 50%; padding: 2px;">5</td> <td rowspan="2" style="border: 1px solid black; padding: 5px;">$3(2)\sqrt{5}$</td> </tr> <tr> <td></td> <td></td> </tr> <tr> <td colspan="2"></td> <td style="border: 1px solid black; padding: 5px;">$6\sqrt{5}$</td> </tr> </table>	4	5	$3(2)\sqrt{5}$					$6\sqrt{5}$								
4	5	$3(2)\sqrt{5}$															
		$6\sqrt{5}$															

How can we rationalize radicals?

① mult top and botm by $\sqrt{\quad}$

② simplify

③ reduce

We remove the radical from the denominator by multiplying the numerator and denominator by the radical.

$$4. \frac{3 \xrightarrow{\sqrt{5}}}{\sqrt{5} \xrightarrow{\sqrt{5}}} = \frac{3\sqrt{5}}{\sqrt{25}} = \boxed{\frac{3\sqrt{5}}{5}}$$

$$5. \frac{6 \xrightarrow{\sqrt{2}}}{\sqrt{2} \xrightarrow{\sqrt{2}}} = \frac{6\sqrt{2}}{\sqrt{4}} = \frac{6\sqrt{2}}{2} = \boxed{3\sqrt{2}}$$

$$6. \text{ Simplify the radical } \frac{\sqrt{45}}{95} \quad \frac{\sqrt{9} \sqrt{5}}{95} = \boxed{\frac{3\sqrt{5}}{95}}$$

$$7. \text{ Simplify the radical } \frac{2\sqrt{147}}{493} \quad \frac{2\sqrt{49} \sqrt{3}}{493} = \frac{2(7)\sqrt{3}}{493} = \boxed{\frac{14\sqrt{3}}{493}}$$

$$8. \text{ Rationalize } \frac{18}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \frac{18\sqrt{3}}{\sqrt{9}} = \frac{18\sqrt{3}}{3} = \boxed{6\sqrt{3}}$$
